

CORE Containment Systems

Unlike the other eight divisions, containment is not sourced from a single external manufacturer. It is intended to become a CORE-engineered product line, developed in-house and manufactured under CORE's own specification.

Cold Aisle / Hot Aisle Containment — CORE Engineering

Planned scope: cold-aisle and hot-aisle containment, manual and automatic sliding doors, roof systems and modular panels, engineered to integrate directly with CORE's rack and cooling divisions rather than as a generic add-on. This is a forward-looking roadmap item, not an existing product or commercial relationship.

CORE's differentiation here will come from tight integration with the rack and cooling technology in Divisions 01 and 08, rather than from a licensed third-party containment product.
